MathFLIX CHALLENGE Successive Events: Independent and Dependent

In order to find the probability of several events occurring in succession, <u>*multiply*</u> the probabilities of the individual events.

Successive events can be *Independent* or *Dependent*.

Independent events are not affected by each other.Dependent events are affected by each other.Example: answers for a multiple choice testExample: answers for a matching test

Successive Events	Gumball Machine	Multiplication Problem	Probability Fraction	Probability Decimal	Probability %
p (red, green)	$ \begin{array}{c} $	$\frac{1}{2} \times \frac{1}{2}$	$\frac{1}{4}$	0.25	25%
p (r, g, b)	$ \begin{array}{c c} \hline \\ \hline $				
p (g ,b, r, r)	$ \begin{array}{c c} \hline \hline$				

Successive Independent Events

Successive Dependent Events

Successive Events	Gumball Machine	Multiplication Problem	Probability Fraction	Probability Decimal	Probability %
p (y,y)	$ \begin{array}{c} $	$\frac{2}{6} \times \frac{1}{5}$			
p (y,b,g)					
p (y,y,b,b)
