## MathFLIX Challenge

## Tangrams

## Geometry Questions

1. Name two sets of congruent triangles.
2. Which tans are similar? $\qquad$
3. Are all the triangles isosceles right triangles? $\qquad$
4. Which quadrilateral is regular? $\qquad$
5. Write a ratio expressing the relationship between the quadrilateral tans and all others. $\qquad$
6. Write a ratio expressing the relationship between triangle tans and all others. $\qquad$

Tangrams are ancient Chinese puzzles that are both fun and full of math. Each of the 7 pieces in the tangram is called a tan. If the area of the tangram equals 1 , what is the area of each $\tan$ ? (We've provided helpful hints!)

$$
\begin{array}{llllll}
\boldsymbol{Y}=\frac{\mathbf{1}}{\mathbf{4}} & \text { sq. unit } & \boldsymbol{U}= & \text { sq. unit } & \boldsymbol{V}= & \text { sq. unit } \\
\boldsymbol{W}= & \text { sq. unit } & \boldsymbol{X}=\frac{\mathbf{1}}{\mathbf{1 6}} & \text { sq. unit } & \boldsymbol{Z}= & \text { sq. unit } \\
\boldsymbol{T}= & \text { sq. unit } & & & &
\end{array}
$$

Study the tangram then answer the question sets below.

## Area Questions

1. Name the smallest pieces. $\qquad$
2. Which are the largest tans? $\qquad$
3. How many tans are $2 / 16$ or $1 / 8$ sq. unit? $\qquad$
4. What is the combined area of $\mathbf{T}, \mathbf{U}, \mathbf{V}$, $\mathbf{W}$ and $\mathbf{X}$ ? $\qquad$
5. What is the combined area of the quadrilaterals? $\qquad$
6. What is the area of the isosceles right triangles? $\qquad$

## Making a Square

Cut the tangram into separate tans so you can move them around to create different squares and complete the table below. (Hint: This is possible for all but 1 number.)

| \# of tans | names of tans | sketch of square <br> using tans | area |
| :---: | :---: | :---: | :---: |
| 1 | $\boldsymbol{W}$ | $\square$ | $\frac{\mathbf{1}}{\mathbf{8}}$ |
| 2 |  | $\square$ |  |
| 3 |  |  |  |
| 4 |  |  |  |
| 5 |  |  |  |
| 6 |  |  |  |
| 7 |  |  |  |
