## MathFLIX challenge

## Roman and Hindu-Arabic Numerals

Inspired by The Number Devil: A Mathematical Adventure by Hans Enzensberger, Susanne Berner, and Michael Heim (May, 2000)

The Number Devil tells Robert that zero was the last number to be discovered. The ancient Romans used a numeration system that had no zero. In fact, they had no numerals. They used letters to express quantity. The system we use today is call Hindu-Arabic and uses 10 unique symbols, including zero, to express quantity.

| Roman Symbols |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{I}=1$ | $\mathrm{X}=10$ | $\mathrm{C}=100$ | $\mathrm{M}=1,000$ |  |
| $\mathrm{~V}=5$ | $\mathrm{~L}=50$ | $\mathrm{D}=500$ |  |  |

Use the table above to count in both numeration systems. In the Roman system, the same letter can't be used more than three times to form a number. Instead, you must place a symbol to the left to "take away" the needed amount. This applies to any amount which would include 4 and 9 as digits.
